

KELL ELECTRICALS LTD

CORPORATE PROFILE

Engineering the Infrastructure of Tomorrow

Electrical Engineering · Power Systems · Renewable Energy · Smart Buildings

Abuja, Nigeria | RC 1852579 | COREN & NEMSA Certified

We engineer trust. We power lives.

Every circuit we design, every system we commission, and every client relationship we build carries the same intent: infrastructure that performs quietly, safely, and indefinitely. This is not a slogan. It is the operating discipline behind everything Kell Electricals Ltd delivers, from a single residential rewiring to a multi-site industrial power upgrade.

CEO MESSAGE

“We don’t just install systems. We engineer confidence for a sustainable future.”

Over the past decade and a half, Kell Electricals Ltd has grown from a small team of committed engineers into one of Abuja’s most trusted names in electrical infrastructure. That growth was never the goal in itself. It has always been a by-product of doing the work correctly: rigorous load calculations, disciplined site practice, honest client communication, and systems that are still performing years after handover.

As we present this profile to partners and institutions considering Kell Electricals Ltd for critical infrastructure work, I want to be direct about what to expect: technical rigor without shortcuts, transparent pricing and timelines, and a culture where safety is never negotiable. Every page that follows reflects the standard we hold ourselves to.

GABRIEL IORYEM

FOUNDER & CEO, KELL ELECTRICALS LTD

EXECUTIVE SUMMARY

A Trusted Engineering Partner for Critical Infrastructure

Kell Electricals Ltd is a COREN and NEMSA certified electrical engineering company headquartered in Abuja, Nigeria, delivering integrated power, renewable energy, and smart-building solutions across residential, commercial, and industrial sectors. Built on fifteen-plus years of disciplined field execution, the company has established itself as a dependable engineering partner for clients who cannot afford system failure.

COMPANY OVERVIEW

Who We Are

Founded in Abuja and built by engineers, Kell Electricals Ltd operates at the intersection of traditional electrical craftsmanship and modern energy engineering. The company is structured around specialist divisions, electrical installation, renewable energy, HVAC, security systems, and facility maintenance, allowing clients to engage one partner for infrastructure that would otherwise require five separate contractors.

LEGAL ENTITY

Kell Electricals Ltd (RC: 1852579)

HEADQUARTERS

741 Alexandria Crescent, Wuse 2, Abuja, Nigeria

CERTIFICATION

COREN & NEMSA Certified

SERVICE FOOTPRINT

Abuja Metro & Nationwide, Nigeria

CLIENT BASE

Residential, Commercial & Industrial

Built on Site, Not in a Boardroom

Kell Electricals Ltd began the way most durable engineering firms do, with a small team solving real problems for real clients, one installation at a time. What started as residential wiring and panel work expanded, project by project, into industrial power systems, renewable energy integration, and full-building automation, as clients returned with larger and more technically demanding work.

That trajectory shaped the company's culture: growth was never chased for its own sake. Each new service line, HVAC, security infrastructure, energy auditing, was added only once the team had the certified expertise to deliver it to the same standard as core electrical work. The result is a company whose breadth of capability was earned through delivery, not claimed through marketing.

VISION & MISSION

Where We Stand, Where We're Going

OUR MISSION

To provide innovative, high-quality electrical engineering services that help our clients strengthen their homes, businesses, and industries through reliable and sustainable infrastructure.

OUR VISION

To be the premier engineering partner in Africa, setting the standard for intelligent infrastructure and renewable energy adoption over the next decade.

BRAND PHILOSOPHY

Precision as a Philosophy, Not a Promise

Kell Electricals Ltd treats engineering as a discipline of consequence, every load calculation, every cable size, every point of earthing exists to protect people and property over decades of use, not just through commissioning day. This philosophy shapes how the company designs, quotes, staffs, and stands behind its work: conservatively engineered systems, transparent client communication, and a refusal to compromise safety margins for speed or cost.

Safety First

Every design decision is filtered through risk to life and property.

Engineered Precision

Systems sized and specified to calculation, never estimation.

Client Partnership

Long-term infrastructure relationships over one-off contracts.

CORE VALUES

Six Principles, Every Project

Integrity

Transparent pricing, honest timelines, and accountable delivery on every engagement.

Innovation

Continuous adoption of modern engineering methods and energy technologies.

Excellence

Workmanship benchmarked against international standards, not local minimums.

Safety

A zero-compromise operational culture protecting both crews and clients.

Precision

Rigorous calculation and testing behind every installation, large or small.

Reliability

Systems and support designed to perform long after project handover.

Chosen by Clients Who Cannot Afford Failure

Certified Engineering

COREN and NEMSA certified processes underpin every design and installation.

Cross-Sector Depth

Proven delivery across residential, commercial, and industrial environments.

Integrated Capability

One partner for power, renewables, HVAC, security, and automation.

Institutional Trust

Track record with government, corporate, and critical-facility clients.

COMPETITIVE ADVANTAGES

What Sets Our Engineering Apart

01 **Single-Partner Integration**

Electrical, renewable, HVAC, security, and maintenance under one accountable contract, eliminating the coordination failures of multi-vendor projects.

02 **Certified Technical Governance**

Every project runs through COREN-certified design review and NEMSA-compliant execution as standard, not as an upsell.

03 **Documented Field Discipline**

Load assessments, protection coordination, and multi-stage testing are standard practice, not exceptions requested by clients.

04 **Local Presence, National Reach**

Abuja-based operational base with delivery capability across Nigeria for multi-site and institutional clients.

Design Conservatively. Build Precisely.

Kell Electricals Ltd designs every system with margin, for growth, for fault conditions, and for the realities of Nigerian grid variability. This is a deliberate departure from minimum-compliance engineering: cable sizing, protection coordination, and equipment ratings are chosen to perform reliably well beyond their rated load, not exactly at it.

Margin by Design

Systems sized above calculated peak load to absorb growth and fault conditions safely.

Standards-Led, Not Minimum-Led

International best practice is the baseline; local minimums are the floor, not the target.

Maintainability from Day One

Every design considers a decade of servicing, accessible panels, labeled circuits, as-built documentation.

SAFETY CULTURE

Safety Is Not a Policy. It Is Our Operating Culture.

Every field engineer at Kell Electricals Ltd operates under a mandatory PPE and site-safety protocol, reinforced by toolbox talks before high-risk work and full NEMSA-aligned compliance across all installations. Safety performance is tracked as rigorously as project delivery, because it is treated as equally non-negotiable.

Mandatory PPE Compliance

High-grade protective gear required for all field personnel, without exception.

Pre-Task Risk Briefings

Toolbox talks and hazard assessments precede every high-risk work activity.

NEMSA-Aligned Practice

Site procedures follow Nigerian Electricity Management Services Agency standards.

SUSTAINABILITY COMMITMENT

Engineering for a Lower-Carbon Grid

As Nigeria's energy mix diversifies, Kell Electricals Ltd positions renewable integration, solar generation, battery storage, and hybrid inverter systems, as a standard design option rather than a niche offering. Every commercial and industrial proposal includes an assessment of renewable and efficiency measures alongside conventional grid solutions.

SUSTAINABILITY FOCUS AREAS

Solar & hybrid power adoption

Energy-efficient HVAC retrofits

Reduced diesel-generator dependency

Recyclable material sourcing where viable

Thermal-imaging efficiency audits

ESG COMMITMENT

Environmental, Social & Governance Priorities

ENVIRONMENTAL

Renewable energy integration, efficiency-first design, and responsible waste handling on every site.

SOCIAL

Local workforce development, apprenticeship training, and safe working conditions for every crew member.

GOVERNANCE

Transparent contracting, documented quality processes, and accountable project reporting to clients.

ESG reporting frameworks and formal certification are part of Kell Electricals Ltd' roadmap as the company scales its institutional and international client base.

Consultation. Execution. Testing.

Every project moves through the same disciplined three-stage quality process, regardless of scale.

01

Consultation

Deep analysis of power requirements, site constraints, and client objectives before any design work begins.

02

Execution

Precision installation following COREN-certified engineering designs and documented site procedures.

03

Testing

Rigorous multi-stage load testing and commissioning verification before final project handover.

Engineering to a Global Baseline

Kell Electricals Ltd operates under COREN (Council for the Regulation of Engineering in Nigeria) and NEMSA (Nigerian Electricity Management Services Agency) certification, and designs its installation and testing practices with reference to recognized international electrical standards. Formal ISO certification is part of the company's active roadmap as it pursues larger institutional and cross-border engagements.

CURRENT & TARGET CERTIFICATIONS

COREN

Active, Engineering practice regulation

NEMSA

Active, Electrical safety compliance

ISO 9001

Roadmap, Quality management

ISO 14001

Roadmap, Environmental management

ISO 45001

Roadmap, Occupational H&S

RISK MANAGEMENT

Identifying Risk Before It Becomes Failure

Electrical Safety Risk

Mitigated through protection coordination, earthing design, and mandatory testing before energization.

Grid Instability Risk

Addressed through surge protection, hybrid backup design, and voltage-stabilization engineering.

Project Delivery Risk

Managed via documented procurement lead times, vetted supplier relationships, and contingency scheduling.

Compliance Risk

Controlled through COREN-reviewed designs and NEMSA-aligned installation procedures on every project.

Building Toward Intelligent Infrastructure

Kell Electricals Ltd is progressively integrating digital tools into its engineering workflow, from centralized client and project management systems to smart-home and building-automation platforms that give clients real-time visibility into their own infrastructure. The company's ambition is self-diagnostic power systems that flag issues before they cause downtime.

Smart Building Integration

AI-managed lighting, climate, and security interfaces unified into one control layer.

Digital Client Systems

Centralized quoting, invoicing, and project tracking for full delivery transparency.

Remote System Monitoring

IP-based surveillance and diagnostic tooling for mission-critical installations.

ENGINEERING DESIGN PROCESS

From Brief to Commissioned System

01

Site Assessment

Load survey, infrastructure audit, and constraint mapping.

02

Engineering Design

Calculation-led system design and protection coordination.

03

Client Review

Transparent proposal walkthrough and specification sign-off.

04

Procurement

Vetted sourcing of certified components and materials.

05

Installation

Certified execution against approved engineering drawings.

06

Testing & Handover

Multi-stage commissioning, documentation, and client training.

Integrated Engineering Across Every Discipline

Sixteen service lines, one accountable engineering partner, from residential wiring to industrial power systems.

RESIDENTIAL SOLUTIONS

Engineering for the Modern Nigerian Home

From single-family homes to luxury estates, Kell Electricals Ltd delivers complete residential electrical infrastructure, wiring and distribution, solar and backup power, smart home automation, and security, engineered to withstand grid instability while blending seamlessly with interior design.

- ✓ Wiring, distribution boards & earthing
- ✓ Solar & hybrid inverter backup systems
- ✓ Smart home & lighting automation
- ✓ CCTV, access control & electric fencing
- ✓ Generator integration & change-over systems

COMMERCIAL SOLUTIONS

Powering Offices, Retail & Hospitality

Kell Electricals Ltd delivers commercial electrical infrastructure engineered for continuous operation, from open-plan office fit-outs to hospitality and retail environments where downtime directly costs revenue. Every commercial project balances code compliance with the aesthetic and operational demands of the space.

- ✓ Full electrical fit-out & panel upgrades
- ✓ Backup power & UPS integration
- ✓ Commercial HVAC & climate control
- ✓ Structured cabling & network infrastructure
- ✓ Emergency lighting & fire-safety compliance

INDUSTRIAL SOLUTIONS

Engineering for Heavy-Duty Operations

Industrial clients demand power systems that tolerate continuous heavy load, harsh site conditions, and zero tolerance for unplanned downtime. Kell Electricals Ltd designs and installs industrial electrical infrastructure, from factory power distribution to motor control and heavy machinery integration, built to the same conservative engineering standard as every other project.

- ✓ High-capacity power distribution & switchgear
- ✓ Motor control centers & industrial automation
- ✓ Factory & warehouse electrical retrofits
- ✓ Generator & backup power systems
- ✓ Load balancing & power factor correction

RENEWABLE ENERGY

Solar, Storage & the Future of Nigerian Power

As grid reliability remains a persistent national challenge, Kell Electricals Ltd positions renewable energy as core infrastructure rather than a backup option. The company designs, sizes, and installs complete solar and hybrid power systems for residential, commercial, and industrial clients, engineered for Nigeria's specific irradiance and grid conditions.

- ✓ Solar feasibility & site assessment
- ✓ Hybrid inverter & battery system design
- ✓ Grid-tie and off-grid configurations
- ✓ Ongoing solar system maintenance
- ✓ ROI & payback-period modeling for clients

SOLAR FARMS

Utility-Scale Solar for Institutional Clients

For clients requiring generation capacity beyond rooftop-scale systems, estates, industrial parks, and institutional campuses, Kell Electricals Ltd engineers ground-mounted solar farm installations. These projects integrate site civil work, array engineering, and grid or hybrid interconnection into a single accountable scope.

- ✓ Ground-mount array design & civil works
- ✓ Multi-inverter system integration
- ✓ Site security & perimeter infrastructure
- ✓ SCADA-ready monitoring architecture
- ✓ Phased deployment for large-scale sites

BATTERY STORAGE SYSTEMS

Storing Power for When the Grid Fails

Battery storage is the component that turns solar generation into genuine energy independence. Kell Electricals Ltd specifies and installs LiFePO4 and other modern battery chemistries sized to real household or facility load profiles, not oversold on capacity clients will never use.

- ✓ LiFePO4 & lithium battery bank design
- ✓ Load-profile-based capacity sizing
- ✓ Hybrid inverter & battery integration
- ✓ Battery management system configuration
- ✓ Safe enclosure & thermal management

POWER DISTRIBUTION

Distribution Systems Built to Carry Load Safely

From main distribution boards to final sub-circuits, Kell Electricals Ltd designs power distribution architecture that protects both people and equipment. Protection coordination, correct cable sizing, and proper earthing form the backbone of every distribution system the company installs.

- ✓ Main & sub-distribution board design
- ✓ Protection coordination & circuit breaker sizing
- ✓ Earthing & lightning protection systems
- ✓ Cable sizing to calculated load, not estimate
- ✓ Panel labeling & as-built documentation

SMART BUILDINGS

Buildings That Respond to How They're Used

Smart building integration unifies lighting, climate, security, and power monitoring into a single controllable layer, reducing energy waste and giving facility managers real visibility into building performance. Kell Electricals Ltd designs these systems to be intuitive for end users, not just technically impressive.

- ✓ Centralized building management systems
- ✓ Occupancy-based lighting & climate control
- ✓ Integrated security & access control
- ✓ Remote monitoring & mobile control apps
- ✓ Energy usage analytics & reporting

HOME AUTOMATION

Effortless Control for the Modern Household

Kell Electricals Ltd designs home automation systems that stay in the background, lighting scenes, climate scheduling, and security integration that simply work, without requiring homeowners to become system administrators. Every automation project is scoped around how the household actually lives.

- ✓ Lighting scenes & circuit-level control
- ✓ Smart climate & HVAC scheduling
- ✓ Voice & mobile app integration
- ✓ Automated gate & access control
- ✓ Integration with existing home wiring

HVAC SYSTEMS

Climate Engineering for Comfort & Efficiency

HVAC design directly affects both occupant comfort and long-term energy cost. Kell Electricals Ltd specifies and installs heating, ventilation, and air-conditioning systems sized to accurate cooling-load calculations, avoiding the oversized, inefficient systems common in the market.

- ✓ Cooling load calculation & system sizing
- ✓ Split, VRF & central HVAC installation
- ✓ Ductwork design & ventilation planning
- ✓ Energy-efficient system retrofits
- ✓ Preventive HVAC maintenance programs

FIRE DETECTION SYSTEMS

Early Warning Systems for Life Safety

Fire detection is life-safety infrastructure, and Kell Electricals Ltd treats its design and installation with corresponding rigor, proper zone coverage, code-compliant device placement, and integration with building evacuation and alarm systems.

- ✓ Smoke & heat detector zone design
- ✓ Fire alarm panel installation & integration
- ✓ Emergency evacuation signaling
- ✓ Integration with building management systems
- ✓ Testing, commissioning & compliance certification

Surveillance & Access Control That Works

Kell Electricals Ltd designs security infrastructure around actual risk profiles and site layouts, not generic camera counts. CCTV coverage, access control, and electric fencing are engineered together as one coherent security architecture, with remote monitoring built in from the start.

- ✓ IP CCTV design & installation
- ✓ Access control & biometric systems
- ✓ Electric fencing & perimeter security
- ✓ Remote monitoring & mobile alerts
- ✓ Integration with existing security infrastructure

CASE STUDY

Full Electrical Fit-Out for a Federal Institution

CBN Multipurpose Cooperative, No. 9 Zaria Street, Garki II, Abuja

THE CHALLENGE

The CBN Multipurpose Cooperative headquarters required complete electrical infrastructure, from first-fix decking and conduit through final wiring and fixture installation, delivered to the standard expected of a federal institution’s corporate premises.

THE ENGINEERING APPROACH

Kell Electricals Ltd executed the full electrical scope in sequence: decking and conduit piping, structured wiring throughout the building, and final fixture and finishing work, coordinated across a multi-month build programme.

THE RESULT

The project was delivered from November 2022 through May 2023, with the complete electrical infrastructure, decking, wiring, and fixtures, handed over ready for occupation.

CASE STUDY

Estate-Wide Electrical & Mechanical Infrastructure

Manreng Estate, Kafe District, Life Camp, Abuja

THE CHALLENGE

Manreng Estate required coordinated electrical and mechanical infrastructure across the development, spanning conduit systems, HVAC piping, and copper pipework alongside standard electrical wiring and fixtures.

THE ENGINEERING APPROACH

Kell Electricals Ltd delivered electrical conduit installation, HVAC piping, and copper pipe work as one coordinated scope, followed by full electrical wiring and fixture installation across the estate.

THE RESULT

The estate was delivered with complete electrical and mechanical infrastructure in place, supporting both power distribution and climate systems across the development.

Factory Conversion Under a Formal SLA

Industrial electrical infrastructure, KELL/AUDIT/2026/04

THE CHALLENGE

Modish Formals required a complete electrical infrastructure conversion for a factory facility within a defined project timeline, coordinated across procurement, civil works, and multiple site stakeholders under a formal service-level agreement.

THE ENGINEERING APPROACH

Kell Electricals Ltd executed a structured scope: site evaluation, bill of quantities, SLA-governed phased delivery, and formal variation-order management as site conditions evolved during the build.

THE RESULT

The project was completed and formally handed over on 11 July 2026, with documented SLA compliance and staged client sign-off at every phase of delivery.

CASE STUDY

Solar Street Lighting for a Command Guest House

Navy Holdings Limited, Command Guest House, Asokoro District, Abuja

THE CHALLENGE

Navy Holdings Limited needed reliable exterior lighting for its Command Guest House that would operate independently of grid supply, improving site security and visibility without adding to the property's running costs.

THE ENGINEERING APPROACH

Kell Electricals Ltd designed and installed a solar street lighting system sized to the property's perimeter and access routes, engineered for consistent nightly operation without grid dependency.

THE RESULT

The property now has independent, solar-powered street lighting across its grounds, improving night-time visibility and security with no ongoing electricity cost for exterior lighting.

CASE STUDY

Solar Power and Renovation, Delivered Together

Andromeda Beauty Locs, Gwarinpa, Abuja

THE CHALLENGE

Andromeda Beauty Locs needed a renovation that combined structural and finishing work with a genuine solar power solution, rather than treating electrical and construction work as separate, uncoordinated projects.

THE ENGINEERING APPROACH

Kell Electricals Ltd delivered a 10kWh solar system installation alongside building renovation, gypsum board ceiling installation, and full electrical wiring, sequencing the electrical rough-in with the finishing work for a clean result.

THE RESULT

The salon now operates on a 10kWh solar system with a fully renovated interior, finished ceiling, and complete electrical infrastructure delivered as a single coordinated project.

CASE STUDY

Solar Backup for a State Government House

Kaduna State Government House, Badiko, Kaduna

THE CHALLENGE

The Kaduna State Government House required a dependable solar backup power system to maintain operations during grid outages, for a facility where continuity of power carries institutional significance.

THE ENGINEERING APPROACH

Kell Electricals Ltd designed and installed a solar backup power system sized to the Government House’s critical load requirements, engineered to provide seamless backup during grid interruptions.

THE RESULT

The Government House now has a dedicated solar backup system in place, providing reliable power continuity independent of grid reliability.

ENERGY AUDITS

Finding the Waste Before You Pay for It

Every energy audit begins with measurement, not assumption. Kell Electricals Ltd conducts thermal-imaging and load-profile audits that identify exactly where facilities lose energy, inefficient HVAC cycling, poor insulation, aging equipment, or unbalanced loads, and quantifies the savings available from fixing each one.

- ✓ Thermal imaging & infrared inspection
- ✓ Load profiling & consumption analysis
- ✓ Equipment efficiency assessment
- ✓ Cost-benefit reporting for upgrades
- ✓ Post-upgrade savings verification

Ongoing Stewardship of Your Infrastructure

Facility management extends Kell Electricals Ltd' responsibility beyond installation into the full operational life of a client's electrical infrastructure, scheduled inspections, rapid-response repairs, and system health reporting that keeps facilities managers ahead of failures rather than reacting to them.

- ✓ Scheduled electrical system inspections
- ✓ Rapid-response repair services
- ✓ System health & performance reporting
- ✓ Vendor & contractor coordination
- ✓ Asset register & maintenance history tracking

PREVENTIVE MAINTENANCE

Maintenance Before Failure, Not After

Kell Electricals Ltd' preventive maintenance programmes, offered across Standard, Gold, and Platinum tiers, replace reactive emergency callouts with scheduled inspection, testing, and servicing. Clients on maintenance plans experience fewer failures, longer equipment life, and predictable annual costs instead of surprise repair bills.

- ✓ Tiered plans: Standard, Gold & Platinum
- ✓ Scheduled AC & HVAC servicing
- ✓ Solar & inverter system health checks
- ✓ Panel inspection & thermal testing
- ✓ Priority response & repair-cost thresholds

Independent Engineering Judgment, On Demand

Beyond installation, Kell Electricals Ltd provides engineering consultancy for clients who need independent technical judgment, feasibility studies, design review, specification writing, and second-opinion assessments for projects being delivered by other contractors.

- ✓ Feasibility studies & technical due diligence
- ✓ Design review & specification writing
- ✓ Independent system assessments
- ✓ Power system planning for new developments
- ✓ Tender documentation & technical evaluation support

PROCUREMENT & SUPPLY CHAIN

Certified Components, Vetted Suppliers

Every component Kell Electricals Ltd installs is sourced through vetted supplier relationships, prioritizing certified, standards-compliant equipment over the cheapest available option. This procurement discipline protects clients from the counterfeit and substandard materials that undermine electrical safety in the broader market.

- ✓ Vetted supplier & manufacturer relationships
- ✓ Certified, standards-compliant component sourcing
- ✓ Transparent bill-of-materials reporting
- ✓ Lead-time planning & contingency sourcing
- ✓ Warranty-backed equipment procurement

A Repeatable Path from Contract to Handover

01	Contract & SLA	Scope, timeline, and service-level terms formally agreed before mobilization.
02	Site Mobilization	Team, equipment, and materials deployed against a documented schedule.
03	Execution & Variation Control	Installation proceeds with formal management of any scope changes.
04	Testing & Commissioning	Multi-stage verification before the system is declared operational.
05	Formal Handover	Documentation, training, and sign-off delivered to the client.

TECHNOLOGY PARTNERS

Equipment Sourced from Recognized Manufacturers

Kell Electricals Ltd specifies equipment from established manufacturers with proven reliability in the Nigerian power environment, rather than the lowest-cost alternative on any given project. Formal technology-partnership agreements are part of the company's roadmap as procurement volume scales.

Inverters & Batteries

Deye, and other proven hybrid inverter and LiFePO4 battery manufacturers

Solar Modules

Tier-1 monocrystalline panel manufacturers meeting IEC standards

Switchgear & Protection

Internationally certified breakers, panels, and protection devices

Security & Automation

Established CCTV, access control, and building-automation platforms

COMPANY TIMELINE

Fifteen Years of Compounding Capability

ORGANIZATIONAL STRUCTURE

Lean Leadership, Specialist Delivery

Kell Electricals Ltd operates a deliberately lean leadership structure, keeping decision-making close to project delivery rather than layered through corporate hierarchy.

Founder & CEO

Overall strategic direction and company vision.

Managing Director

Operational leadership and project governance.

Lead Electrical Engineer & IT Supervisor

Technical design authority and systems oversight.

Sales & Client Relations

Client engagement, quoting, and account management.

EXTENDED ORGANIZATIONAL STRUCTURE

Functions Across the Business

Beyond core leadership, delivery is organized into specialist functions, each accountable for a distinct part of the client and project lifecycle.

Engineering & Design

Load calculations, system design, and technical specification for every project.

Field Operations

Installation, commissioning, and on-site execution across residential, commercial, and industrial work.

Renewable Energy Division

Solar, battery storage, and hybrid system design and deployment.

HVAC & Climate Systems

Cooling-load engineering, HVAC installation, and ongoing servicing.

Security & Automation

CCTV, access control, and smart-building integration.

Procurement & Inventory

Vetted sourcing, stock management, and supply-chain coordination.

Customer Relations

Client onboarding, account management, and service communication.

Interior & Finishing

Coordination between electrical infrastructure and architectural finish.

Quality & Compliance

COREN and NEMSA-aligned design review and testing standards.

CORPORATE GOVERNANCE

Accountable Structure, Documented Process

Kell Electricals Ltd operates as a registered Nigerian limited company (RC: 1852579), with clearly defined leadership accountability and documented processes governing contracting, quality, and client engagement. Corporate governance practices continue to formalize as the company scales toward institutional and international engagements.

- ✓ Registered limited liability entity under CAMA 2020
- ✓ Documented Standard Terms & Conditions across all contracts
- ✓ Defined leadership roles & decision authority
- ✓ Formal SLA and variation-order governance on projects
- ✓ Continuous alignment with Nigerian regulatory requirements

HSE FRAMEWORK

Health, Safety & Environment, Formalized

The company's Health, Safety & Environment framework governs every field engagement, from mandatory PPE and pre-task risk briefings to NEMSA-aligned electrical safety procedures and environmentally responsible site practices. HSE performance is tracked project-by-project as a standing operational metric, not an afterthought.

- ✓ Mandatory PPE & site safety protocols
- ✓ Pre-task hazard identification & risk briefings
- ✓ NEMSA-aligned electrical safety compliance
- ✓ Zero Lost Time Injury record across delivered projects
- ✓ Responsible waste handling & site environmental practice

Modernizing How Infrastructure Is Managed

Kell Electricals Ltd has digitized core business operations, client management, invoicing, quoting, and project tracking now run through centralized digital systems rather than fragmented manual processes. This same digital-first approach extends to client-facing tools, giving clients transparent visibility into their own projects and accounts.

- ✓ Centralized client & project management systems
- ✓ Digital invoicing, quoting & payment tracking
- ✓ Client portal access for account transparency
- ✓ Automated client communication workflows
- ✓ Digital documentation & as-built record keeping

BIM & CAD CAPABILITIES

Designing in the Same Language as Architects

For projects requiring coordination with architects and other engineering disciplines, Kell Electricals Ltd produces electrical designs in CAD-compatible formats, enabling clash detection and clean integration with broader building information models. This capability is scaling as the company takes on larger institutional and multi-discipline projects.

- ✓ CAD-based electrical schematic design
- ✓ Coordination-ready drawings for multi-discipline projects
- ✓ As-built documentation in CAD format
- ✓ Panel schedules & single-line diagram production
- ✓ BIM coordination capability under active development

Engineering Discipline, Made Explicit

The calculation methods, sizing standards, and testing procedures behind every Kell Electricals Ltd installation.

LOAD CALCULATION METHODOLOGY

Sizing to Calculated Demand, Not Estimate

Every Kell Electricals Ltd design begins with a documented load calculation rather than a rule-of-thumb estimate. This determines the true maximum demand a system must carry, which in turn drives every downstream sizing decision, from cable gauge to breaker rating to transformer capacity.

- 01

Connected Load Survey

Every circuit and appliance catalogued against its rated power draw.
- 02

Demand Factor Application

Diversity and demand factors applied per recognized engineering tables, not assumed.
- 03

Maximum Demand Calculation

Peak simultaneous load determined to size supply and distribution correctly.
- 04

Growth Margin

Capacity reserved above calculated demand for future load growth.

WHY THIS MATTERS

*Undersized systems fail under real load.
Oversized systems waste client capital.
Calculation-led design is the only way to
get the number right the first time.*

CABLE SIZING & PROTECTION STANDARDS

Conductors and Protection Sized to Coordinate

Cable sizing and protective device selection are treated as one coordinated decision, not two separate steps. A cable rated correctly for its load but protected by the wrong breaker is still an unsafe installation.

Current-Carrying Capacity

Conductor cross-section selected against calculated load current, not minimum code compliance.

Voltage Drop

Cable length and gauge checked against acceptable voltage drop over run distance.

Protective Device Coordination

Breaker and fuse ratings selected to protect the specific cable installed, with correct discrimination between upstream and downstream devices.

Installation Method De-Rating

Cable ratings adjusted for conduit fill, ambient temperature, and grouping with other circuits.

Fault Current Withstand

Protective devices verified to interrupt the maximum prospective fault current at their point of installation.

Earthing & Bonding

Earth fault loop impedance calculated to guarantee protective device operation within required disconnection time.

TESTING & COMMISSIONING STANDARDS

Nothing Is Energized Untested

Every installation passes through documented testing before handover, regardless of project size.

✓ **Continuity Testing**

Protective conductor and bonding continuity verified across every circuit.

✓ **Polarity Verification**

Correct polarity confirmed at every point of the installation.

✓ **RCD Operation Testing**

Residual current devices tested at rated and five-times-rated trip current.

✓ **Insulation Resistance**

Insulation resistance measured between conductors and earth before energization.

✓ **Earth Fault Loop Impedance**

Loop impedance measured to confirm protective devices will operate within required disconnection times.

✓ **Functional Testing**

Full system operation verified under load before client handover.

PREVENTIVE MAINTENANCE PROGRAMS

Three Tiers of Ongoing Protection

Every plan replaces reactive, unplanned callouts with scheduled inspection and servicing, so small issues are caught before they become expensive failures.

STANDARD

QUARTERLY VISITS

Scheduled inspection and core system checks for clients who want dependable baseline coverage.

- ✓ Quarterly electrical panel inspection
- ✓ Circuit and earthing continuity checks
- ✓ Visual thermal-risk assessment
- ✓ Digital inspection report after each visit

GOLD

BI-MONTHLY VISITS

Everything in Standard, plus air-conditioning servicing and faster response when issues arise.

- ✓ Everything in Standard
- ✓ Bi-monthly HVAC and AC servicing
- ✓ Solar and inverter performance checks
- ✓ Priority scheduling for repair callouts
- ✓ 48-hour response window

PLATINUM

MONTHLY VISITS

Full-coverage plan for clients who need maintenance treated as a fixed, predictable cost.

- ✓ Everything in Gold
- ✓ Monthly full-system inspection
- ✓ Repair costs covered up to plan threshold
- ✓ 24-hour priority response window
- ✓ Dedicated account engineer

Full plan inclusions, pricing, and response-time commitments detailed in individual client proposals.

EMERGENCY RESPONSE SERVICES

24/7 Response When Systems Fail

Electrical faults do not wait for business hours. Kell Electricals Ltd maintains 24/7 emergency response capability for clients facing power failures, fault conditions, or safety-critical electrical issues, with rapid dispatch and fault-diagnosis capability built for urgency.

- ✓ 24/7 emergency dispatch availability
- ✓ Rapid fault diagnosis & isolation
- ✓ Priority response for maintenance-plan clients
- ✓ Temporary safe-power restoration where possible
- ✓ Full incident documentation & root-cause reporting

Managing Infrastructure from Install to Retirement

Every electrical asset Kell Electricals Ltd installs is tracked through its operational life, from commissioning date and warranty status through scheduled servicing and eventual replacement planning. This lifecycle visibility helps clients budget for infrastructure renewal rather than face unplanned capital expenditure.

- ✓ Asset registers with commissioning & warranty data
- ✓ Scheduled servicing aligned to manufacturer guidance
- ✓ End-of-life & replacement planning
- ✓ Performance degradation tracking over time
- ✓ Capital planning support for infrastructure renewal

VENDOR MANAGEMENT

Disciplined Vendor Relationships, Consistent Quality

Kell Electricals Ltd maintains a vetted network of suppliers and subcontractors, each assessed against consistent quality and reliability criteria before being engaged on client projects. This disciplined approach to vendor management protects project timelines and ensures consistent standards regardless of which supplier is involved.

- ✓ Formal supplier vetting & qualification process
- ✓ Consistent quality standards across all vendors
- ✓ Performance tracking for repeat suppliers
- ✓ Contingency sourcing to protect project timelines
- ✓ Direct relationships reducing markup and delay

CLIENT ONBOARDING JOURNEY

A Clear Path from First Contact to Kickoff

Kell Electricals Ltd designed its client onboarding process to eliminate the ambiguity that often stalls infrastructure projects, clear steps from initial inquiry through formal contracting, so clients always know what happens next and when work begins.

- ✓ Initial inquiry & requirements discussion
- ✓ Site visit & technical assessment
- ✓ Formal proposal & transparent pricing
- ✓ Contract & SLA agreement
- ✓ Scheduled mobilization & project kickoff

CLIENT TESTIMONIALS

What Clients Say About Working With Us

Feedback drawn from client reviews across residential and commercial engagements. Named case references appear in the Case Studies and Signature Projects sections.

“

“They showed up when they said they would, and the quote was the final price. No surprises, no delays.”

RESIDENTIAL CLIENT, ABUJA

“

“Our office move-in date depended on the electrical fit-out finishing on time. It did, and it has not given us a single problem since.”

COMMERCIAL CLIENT, ABUJA

“

“What stood out was how much they explained. We understood exactly what we were paying for and why.”

RESIDENTIAL CLIENT, ABUJA

“

“The solar system has performed exactly as promised. Our generator runs a fraction of what it used to.”

COMMERCIAL CLIENT, ABUJA

4.8 / 5 average rating · 187+ verified reviews

Investing Beyond the Contract

Kell Electricals Ltd' CSR commitment centers on workforce development within the communities it serves, offering apprenticeship training that gives young Nigerians a certified pathway into electrical engineering, while strengthening the skilled-labor pipeline the industry depends on.

- ✓ 2-year & 4-year apprenticeship programmes
- ✓ Hands-on training under certified engineers
- ✓ Structured pathway into licensed electrical work
- ✓ Local workforce prioritization on regional projects
- ✓ Formal community investment programme in development

AWARDS & RECOGNITION

Recognition in Progress

Kell Electricals Ltd has built its reputation through sustained client satisfaction rather than industry accolades to date. As the company pursues larger institutional and international engagements, formal industry recognition and awards will be documented here.

STRATEGIC ROADMAP TO 2035

The Next Decade of Kell Electricals Ltd

2026 to 2028

Foundation & Systems

Formalize ISO certification pathway, scale digital operations, deepen institutional client base in Abuja.

2029 to 2032

Regional Expansion

Extend delivery capability across additional Nigerian states, expand renewable energy and solar-farm capacity.

2033 to 2035

Intelligent Infrastructure

Self-diagnostic power systems, expanded smart-city capability, first cross-border engagements.

FUTURE VISION

The Future Is Intelligent Infrastructure

Kell Electricals Ltd' long-term ambition extends beyond installation and maintenance toward self-diagnostic power systems, infrastructure that identifies its own faults before they cause downtime, and energy systems that actively optimize themselves for cost and reliability. This is the natural evolution of the company's existing smart-building and digital-monitoring capability.

- ✓ Self-diagnostic power & fault-prediction systems
- ✓ Fully integrated smart-city-ready infrastructure
- ✓ AI-assisted energy optimization for clients
- ✓ Expanded renewable generation & storage capacity
- ✓ A recognized engineering standard-bearer in West Africa

From Abuja to West Africa

Kell Electricals Ltd' expansion strategy is deliberately sequenced: consolidate technical and operational excellence in Nigeria, formalize international-grade certifications, and then extend delivery capability into neighboring West African markets facing similar infrastructure and energy-reliability challenges.

- ✓ Phase 1: Deepen Nigerian institutional & industrial base
- ✓ Phase 2: Complete ISO certification & governance formalization
- ✓ Phase 3: Establish regional partnerships in West Africa
- ✓ Phase 4: Direct delivery capability in priority markets
- ✓ Sustained focus on engineering quality over rapid scale

04

INVESTMENT CASE

Investing in Nigeria's Power Future

A structured opportunity to back a proven engineering operator as it scales institutional and regional delivery capacity.

INVESTMENT OVERVIEW

A Proven Operator,
Positioned to Scale

Kell Electricals Ltd is exploring structured investment to accelerate its strategic roadmap, formal ISO certification, regional expansion, and deeper institutional delivery capacity, building on fifteen-plus years of profitable, disciplined operation. Specific terms are under active development and available to qualified investors on request.

INDICATIVE TERMS

FUNDING ASK

TBD

INSTRUMENT

TBD

USE OF FUNDS

See following page

TARGET CLOSE

TBD

Figures marked TBD are finalized on a per-investor basis following initial discussion.

USE OF FUNDS

Where Investment Would Be Deployed

Indicative allocation, subject to final terms and investor discussion.

ISO Certification & Compliance	TBD	Complete ISO 9001, 14001 and 45001 certification pathway.
Regional Expansion	TBD	Establish delivery capability in priority West African markets.
Equipment & Fleet	TBD	Expand testing equipment, vehicles, and field capacity.
Digital Infrastructure	TBD	Scale client systems, monitoring platforms, and reporting tools.
Working Capital	TBD	Support larger institutional project cash-flow requirements.

GROWTH PROJECTIONS

The Trajectory Ahead

Detailed financial projections are available to qualified investors under a signed non-disclosure agreement. The structure below reflects the roadmap this section supports.

YEAR 1

Foundation

ISO certification, digital systems, deepened Abuja institutional base.

YEAR 2 TO 3

Expansion

Regional market entry, expanded fleet and workforce capacity.

YEAR 4 TO 5

Scale

Multi-country delivery, established regional engineering brand.

Revenue, margin, and headcount figures: available on request.

FREQUENTLY ASKED QUESTIONS

Questions from Procurement & Tender Reviewers

Q. Is Kell Electricals Ltd a registered legal entity?

Yes. Kell Electricals Ltd is a registered Nigerian limited company, RC 1852579, incorporated under CAMA 2020.

Q. What certifications does the company hold?

Kell Electricals Ltd is COREN and NEMSA certified. Formal ISO 9001, 14001, and 45001 certification is on the company's active roadmap.

Q. Does the company work outside Abuja?

Yes. Kell Electricals Ltd delivers projects across Nigeria and maintains an Abuja-based operational base for national and multi-site engagements.

Q. Can the company handle multi-site or phased contracts?

Yes. Signature projects have included phased delivery under formal SLAs with staged sign-off and variation-order management.

Q. What is the standard project delivery process?

Every project follows the same structure: consultation, engineering design, procurement, installation, and multi-stage testing before handover, detailed in the Project Delivery Methodology section.

FREQUENTLY ASKED QUESTIONS

Additional Questions

Q. How does Kell Electricals Ltd source components and materials?

Through a vetted supplier network prioritizing certified, standards-compliant equipment, detailed in the Procurement & Supply Chain section.

Q. What warranty or after-sales support is provided?

Warranty terms are set out per project in the formal contract and SLA. Clients on maintenance plans receive ongoing scheduled servicing and priority repair response.

Q. Does the company carry insurance for its work?

Insurance and liability coverage details are provided during contracting and are available for review as part of standard due diligence.

Q. How are disputes or service issues handled?

Through the terms set out in the company's Standard Terms & Conditions and formal SLA documentation, with escalation paths defined per contract.

Q. Can Kell Electricals Ltd provide references from prior clients?

Yes, subject to client confidentiality agreements. Verified client feedback is summarized in the Client Testimonials section.

For questions not covered here, contact details are provided in the following section.
